

**Zirconia dental
implant solution**

CUSTOMIZED ABUTMENT
from STL file

Metal-free
Strong material
Customized colour
Bacteriostatic

Implant system	Thread	Connection	Ø	h
Ivory	Single	Trilobe cemented conical	Ø 3.3 - 4.1 - 5.2 mm	h 8 10 11.5 mm

BENEFITS

Metal-free: zirconia ceramic, used for Ivory® implants, is hypoallergenic.

Bacteriostatic: zirconia is a bacteriostatic material capable of inhibiting the growth or reproduction of bacteria on the implant surface and on the abutment connection. The result is a greater restorative flexibility and a better state of soft tissues. The risk of peri-implantitis is significantly reduced.

Colour: the light colour of zirconia can be adapted to all the prosthetic solutions according to “VITA” system that offers 16 natural tooth shades, empirically determined, ideal for aesthetic results.

Osseointegration: both zirconia and titanium implant materials are biocompatible and integrate well with the bone and gums.

Price: two different prices for two different solutions; *solution 1*: implant plus customized abutment, *solution 2* implant plus customized abutment and crown.

1. Trilobe conical cemented connection
2. Convergent neck for bone and tissue level
3. Micro thread on the implant neck
4. Single reverse thread on the implant body
5. Cylindrical body
6. Rounded apex
