# Orthodontic Mini Screws (TADs)

## TEMPORARY ANCHORAGE DEVICES

Orthodontic Mini Screws - Temporary Anchorage Devices (TADs) are used to facilitate the movement of teeth through what is called skeletal Anchorage. TADs Appliances are placed directly into the jawbone then teeth are pulled towards the TADs via elastic or spring traction. When installed, the Mini screw is in constant and direct contact with the bone and does not possess a periodontal ligament. As a result, it does not move when orthodontic force is applied, and therefore can be used as "absolute anchorage".

**MATERIAL:** Ti-6AL-4VELI (Titanium grade 5).

**PACKAGING:** Individual sterile tube, in a double blister package.

**SPECIFICATIONS:**

**HEXAGONAL HEAD WITH A HOLE**

- Hole 0.8mm (suitable for orthodontic wire up to .021 "x.025") for fixation and traction.

**TRANSMUCOSAL SECTION**

- Transmucosal section with perfect adaptation and tissue and peri-implant soft tissues.

**TITANIUM GRADE 5 ALLOY**

- Combines properties such as low specific weight, high strength to weight ratio, very high corrosion resistance, and excellent general biocompatibility.

**APICAL**

- Active point with self-piercing tip profile, specially designed to offer stability secure fit in bone texture and resistance to applications of immediate orthodontic loads.
- Self-tapping.
- Self-drilling.

ORTHODONTIC KIT	CODE - ORTKIT
-----------------	---------------

The kit is made of engineering polymer with high resistance to temperatures of high autoclaves temperatures. The tools have standard coupling allowing docking in reducing surgical against angles.

The key to fitting is equipped with contain Nitinol o´ring, which facilitates engagement and disengagement of Miniscrew and prevents the wear of material sterilizations.
